Deepak art and craft oil pastel for beginners

From the beginning, oil pastels seem and incredibly easy to master. After all, how complex can a pigment stick and binder really be?! Simple as they might look like oil crayons - this medium is extremely difficult to master. Even those artists who come from a background in the ancient means of oil painting can be quickly engraved on how this particular medium interacts with the surface. Just put....there's no other way enough like oil pastels. But if you just got a new set of high-level oil pastels and are trying to expand your creativity, we wanted to put this guide together to help you on your journey. After using some of the techniques used by artists in many of the videos below, you will begin to further stretch your creative limits. So, the buckle inside and we begin to learn more about the techniques of beginner, intermediate and advanced oil pastel: 10 pastel techniques of Sakura of America In this video Mr. Otter Studio goes beyond various mixing techniques that you can use with oil pastels that include mixtures among the following: Color + whiteColor + grayColor + blackColor + white + black But beyond the mixing that the artist goes beyond, you will also learn to various pressures with your pastels (and the results you will see), as well as effects (which include stippling, scruff, and scratched). After watching the whole tutorial, you should have a better understanding of how you can use the oil pastels a little differently go on. 6 pastel oil techniques by Jackie Ruzicka Very similar in nature to the video mentioned above, this pastel oil video by Jackie is subdivided into 6 sections to help demonstrate on how to use oil crayons a little better. In this video Jackie exceeds the following techniques: BlendingLayering CortoStrokesPointillism Drawing The video quality on this is a bit clearer than the one made by Sakura, so those following at home should not haveseeing the details Jackie posed on the pastel card. The bases of pastel oil from Let create something I really liked this video because it is simple dead and requires you to get your hands dirty. Here we will see how even the cheapest of oil pastels can still do for breathtaking results (a mantra has repeated here all the time that its practice does not the price of supplies it matters). In the video you get to see how both a flower and a whale are made by just a few pastels of oil that are also mixed with the tips of your fingers. For those who love to jump forward and get to the good stuff - the design part of the video starts at sign 1:55. How to Dilute Oil Pastels One thing many artists tend to forget when working with oil pastels is that they are... Well... made from oil! As any oil painter will tell you, manipulating this medium is quite easy when using the right solvents. Here Gene Shaw walks through us as he will clear a pastel design of oil with simple thinner paint. Now as a caution word here - Gene uses thinner paint shop hardware, which is really bad as it contains a lot of impurities. Therefore, if you want to use its technique it is recommended to read our odorless mineral spirits and turpentine posts where you talk about why these are so different from your hardware store thin paints. Regardless of the solvent used, the results will be almost identical (and much safer when using the subtlest grade artist). Rule 3s of Patrick Neumann We mentioned this video once on our site before, but we really think it is worth mentioning again. Here Patrick walks through his technique when it comes to selecting colors with pastels of oil. He likes to take what is called the rule of 3's - selecting three colors from the same family and using themour work of art. This creates a similar set of colors that will help your artwork look more natural. It is worth taking a look at this video completely to see these big little little onesof information that Patrick shares with us. Oil Pastel Speed Painting by Ellie Fine Art Sometimes we do not want to sit down and watch a long tutorial with an artist who tells you what they did every step of the way, ...and this is completely ok! Personally, I get nervous sometimes! In any case, here is a speed painting of Ellie of a beautiful Aquila Baldo which is only 3:03 in duration. Here you can see the various techniques and tricks you use in his work of art to develop layers, highlights and more. Abstract Landscape - Madhubala Oil Pastel Painting Lesson in front of the above mentioned speed painting, here is a pastel oil painting in real time of Madhubala that ends in a breathtaking piece. In all honesty, from seeing the miniature video initially, I thought this was an oil painting and the title of the video was wrong. But after watching the video, I was impressed by the level of detail that the artist was able to realize in this piece. If you are interested in developing layers and want to blur lines between pastels of oil and oil paintings, check this video, you will not be disappointed. Baby Oil & Trista Pastel Oil While we have previously seen an artist use a solvent to divide the bonds between oil and pigment within the oil pastels (see: how to dilute oil pastels), in this Trista video takes the opposite approach and uses baby oil to extend oil pastels. When you mix a little child oil on a Q-Tip or paint brush, you can start brushing or extending the oil pastel to look much smoother in your artwork - and eventually reach a painter as an effect. While the above video is 5:49 long, if you want to see only the part with the application of baby oil, jump ahead to sign 3:49 where it begins to apply it to blue reflection of the apple. Pastel oil TutorialParrot - by Mr. Otter Art Studio The same artist who was presented in our first pastel oil technique (see: 10 techniques of pastel oil of Sakura of America), invideo the artist surpasses the method of reverse scratch by transferring and transforming an ink that is drawn into a beautiful pastel oil. It is a creative method that the artist employs and that it is difficult to put in words! But if you are looking for a way to expand your creativity and push yourself as an artist, check the video above - you will not be disappointed! Galaxy Drawing with Pastel Oil from Deepak Everyone loves a good galaxy painting, especially a fact of oil pastels. In this video Deepak allows us to look beyond the shoulder as it demonstrates its method to create a starry galaxy with pastels of oil. While the subject itself is captivating, what we really appreciated, and the reason for its inclusion, is the techniques that the artist uses during the creation of this piece. Normally you think with painting, the initial washing must go down first, but the opposite is happening here. With a bit of masking the magic of the tape, you can see how the artist is able to make the colors of the planets really jump from the page. But it doesn't end with the masking of the tape, check the video to see some of the other slick techniques it uses. Push the limits with the pastels of oil If there is a underlying theme of the videos above selected is that it is always necessary to push the limits with pastels of oil. As we said at the beginning of this article, oil crayons are notoriously difficult to master. So, take notes of the videos above, but don't think that this is the end all to be all when it comes to this medium. Moreover, we always want to emphasize the time and time again that the supplies no matter as much as the artist who holds the medium. The biggest way to improve as an artist is not to buy professional grade supplies, but instead of getting into the studio and practicing regularly. While it may seem frustrating and hopeless sometimes,that with regular practice really unlocks the joys of creating beautiful works of art! In my previous post aboutwith chalk pastels, I talked about how to draw dogs and some advice on the use of chalk pastels. In this I am exploring their most daring cousins, almost more infant - oils; and focus on drawing landscapes or life again. Pigments in oil pastels are tied together with a mixture of wax and fat that gives them a fat texture. The color range is relatively limited compared to chalk pastels, however you can buy sets that contain 96 different shades, you would be hard pressed for more than this. They do not crumble or become dusty, but they smudge and can easily be overloaded in mud. Applying a thick layer, you can draw negatively (i.e. scratch the pigment on the page) to create interesting effects. This post contains affiliate links. Click here to read my full disclosure policy. IClick here for tips for beginners on painting with watercolors.} Some tips for drawing with oil pastels: Oil crayons are not so messy as chalk pastels, but still it can be difficult to keep your fingers clean. It can help to work with a damp cloth at hand. You need to be aware of where the hand ball is restful (I hope not on a already colored part of the page) or draw with the raised hand. If possible start working from top to left of the page if you are right or higher to right if you are left delivered. It's trying to start drawing darkly as the colors are so rich and smooth, but start pressing slightly until you feel sure you have the right tone and line. If you make mistakes you can't rub it out! But there are no things like mistakes in art anyway. Colors can be mixed nicely if you overlap different shades. However, try not to overdo the layers of color as it mud easily,the last highlights. Spray your finished piece with a fixative to avoid drooping (even the normal ironing works, use with scaling and spray outside). Try different techniques Oil pastels are brilliant to create quick sketches as howfor the paintings. You could fill a sketch book with ideas and drafts very quickly that would help you plan your composition and color combinations. Here I wanted to try to collect some of the sunset yellows on the trunks of the trees and positioning a low horizon with a view mostly filled with attenuated trunks. The effect was more than to create an impression of many trees in a line at the edge of a lawn rather than try to accurately draw each tree. Garden design The following design is ancient! (before 1990). My sister took riding lessons on a farm in Midrand, north of Johannesburg and I took her there. I once decided to bring my sketch book and fill the wait with the drawing. It must have been winter as the earth and grass is so dry and the lake a vivid blue to reflect a cloudless sky. You can see I didn't bother too much with getting those right leaves! Drawing the landscapes is easier than people as there is more margin of error, but trying to draw the individual leaves and stems of grass is impossible. It is better to go for a general impression of light and shadow and add textures with layers of color. I drew it on a light brown paper to give a subtone to the earthy shades, however, I think that muddies the sky too (I would probably have been able to work a little longer on it). High, South Africa, Oil Pastels Because oils are so bold and bright that I love to draw on a black background as it contrasts so well and seems to make pop out pictures a little. This first illustration I drew in pencil before and then worked on the individual pieces in the arrangement. I built layers of shadow and finished drawing the highlights with a white pastel. Drawing a white object is difficult, but if you look carefully at what you draw, you will see a range of colors and grays from the reflections of the surrounding objects, no white object is ever completely white! coffe with laura the pastels that oo are ultra soft andrange is fabulous, I am a little too well loved by this stage as I let the kids use them because the cheapest from the local stationery store just aren't quite beautiful. I have the Neopastel range of Caran D'Ache, I will put a link at the bottom of this page you can click on to buy your set. Studio Nasturtium Mia grandmother was an artist and she was the one who presented me the differences between chalk and pastel of oil. Until I finished my school, I had only designed in oils and she presented me the novel idea of going to an art shop and selecting one or four single chalk pastels at a time, of having them accurately wrapped in fabric and precisely stored in a wooden box to prevent them from cracking. This life still below put together for me his things over the scarf that gave me that Christmas is made in chalk pastels that I designed at his house when I went to visit her in Edinburgh. It also introduced me the idea of drawing on the thinner grade sandpaper - the texture of the sand paper surface pulls out the pigments even more. You'd be hard to press to tell the difference to look at it, which kind of pastels I used. Dead nature in chalk pastels on top quality sand paper Children's field In summer I teach a field of art for children. Oil pastels are a great means to heat the exercises and quick sketches, they are easy and fast to clean also - no water spill or paint brushes to clean up after! They also work well as a means of resistance with water-based paint. These underwater images were created by drawing the fish first in pencil and then permanent marker. Then children added color to the fish and to the basic features using oil pastels. Finally they created a thin washing of blue watercolor paint and applied it in wide stretches onYou can see where the pastels shine through the paint, especially in the green stems in the lower photo. Nate's Piranha in oil pastels andFish of Fia in pastel and watercolor You can also melt the pastels of oil in white spirits to create a more watery and diluted effect on the page. You need to use a thick card to avoid wrinkles - 125gsm or more. Resources: These are the pastels I use, this range also comes in a set of 12, 24 or a much larger set of 96 (drool drool). I would suggest you have a set of at least 48 If you want a good variety of colors. This set contains at least 10 shades of green and about 10 neutral shades - all essential for the design of landscapes. It also has a beautiful range of skin tones if you feel brave enough for portraiture! Caran d'Ache NEOPASTEL pastel oil (Box of 48)Ingres pastel paper Spirale Pad 6 assorted colors DALER-ROWNEY - 16 x 12' And finally, I highly recommend this book 'Drawing with Colour' by Judy Martin, full of beautiful work and useful tips in a range of media. It is difficult to read this book and not feel inspired later. Just look at that illustration cover designed in pastels! Drawing with Color Hardcover - 26 Oct 1989 by Judy Martin And learn how to draw the human face? Click on the link to visit this post where I teach you to draw all the features in proportion.
